

APPENDIX VI. ANALYTICAL METHODS, 2001 FSIS NATIONAL RESIDUE PROGRAM

Implementing the NRP requires analytical methods for detecting, quantifying, and identifying residues that may be present in meat, poultry, and egg products. Results from the residue testing are used by the Agency to determine whether a product is adulterated. The following Table AVI, *Analytical Methods*, describes the types of methods used by FSIS to conduct analyses.

KEY TO ABBREVIATIONS

APCI -- Atmospheric Pressure Chemical Ionization

Confirm. -- Confirmatory Method

Determ. -- Determinative Method

ECD -- Electron Capture Detector

ELISA -- Enzyme-Linked Immuno Sorbent Assay

GC -- Gas Chromatograph

GPC -- Gel Permeation Chromatography

HPLC -- High Performance Liquid Chromatography

Method Detection Limit -- The lowest amount of individual residue or sample component that can be reliably observed or found in the sample matrix by the current appropriate analytical methodology.

Minimum Reportable Level -- Lowest level at which an analytical result is reported.

MS -- Mass Spectrometry

NA -- Not Applicable

ppb -- Parts per billion

ppm -- Parts per million

SIM -- Selected-Ion Monitoring Mode

TBD -- To Be Determined
