public comment on this petition by reisman

reismen uses the statement "generally" pathology free - who determines which lung is pathology free and which is full of pathology to cause illness. reismen offers no proof of this statement.

reisman cites united kingdom as having no ill effects but shows no studies on that. who can accept simply reisman statement as to safety in u.k. nobody changes this kind of ruling without substantial background information on research. reisman presents zero.

reisman claims waste from allegedly not using lungs. that is a fake statement in that th elungs are used in pet food so there is no waste in this lungs at all. the statement is fake.

why would usda even consider such a petition? this comment is for the public rfecond
