Cutting Boards and Food Safety

Which is better, wooden, or plastic cutting boards? Consumers may choose either wood or a nonporous surface cutting board such as plastic, marble, glass, or pyroceramic. Nonporous surfaces are easier to clean than wood.

Avoid Cross-Contamination

The Meat and Poultry Hotline says that consumers may use wood or a nonporous surface for cutting raw meat and poultry. However, consider using one cutting board for fresh produce and bread and a separate one for raw meat, poultry, and seafood. This will prevent bacteria on a cutting board that is used for raw meat, poultry, or seafood from contaminating a food that requires no further cooking.

Cleaning Cutting Boards

To keep all cutting boards clean, the Hotline recommends washing them with hot, soapy water after each use; then rinse with clear water and air dry or pat dry with clean paper towels. Nonporous acrylic, plastic, or glass boards and solid wood boards can be washed in a dishwasher (laminated boards may crack and split).

Bamboo Cutting Boards

Bamboo cutting boards are harder and less porous than hardwoods. Bamboo absorbs very little moisture and resists scarring from knives, so they are more resistant to bacteria than other woods. Clean bamboo cutting boards with hot soapy water; sanitize if desired. Rub with mineral oil to help retain moisture.

Replace Worn Cutting Boards

All cutting boards wear out over time. After cutting boards become excessively worn or develop hard-to-clean grooves, they should be discarded.

Food Safety Questions?

Call the USDA Meat & Poultry Hotline

If you have a question about meat, poultry, or egg products, call the USDA Meat and Poultry Hotline toll free at 1-888-MPHotline (1-888-674-6854). The hotline is open year round.

Send E-mail questions to MPHotline/fsis@usda.gov.

Ask Karen.gov

FSIS’ automated response system can provide food safety information 24/7 and a live chat during Hotline hours.

Washing and sanitizing is important to keep your cutting boards clean. A nonporous cutting board is a good choice to prevent the spread of bacteria.

The Food Safety and Inspection Service (FSIS) is the public health agency in the U.S. Department of Agriculture responsible for ensuring that the nation's commercial supply of meat, poultry, and egg products is safe, wholesome, and correctly labeled and packaged.

The USDA is an equal opportunity provider and employer.
